

Deutsches Reich.

Das Reichsbergwerkamt hat bei der Generalverwaltung den Bescheid gemacht, für die Bergwerksgenossenschaften die Vergünstigung zu erwirken, welche den kaufmännischen Verkehr zugunsten ist und wesentlich dazu beitragen würde, die Leiber bei allen Bergwerksgenossenschaften beträchtlich hohen Staatspositionen für Forti einzigermaßen herabzumindern. Bei den zahlreichen Cirkularen und Erlassen, welche die Bergwerksgenossenschaften zu versenden haben, um die Vermoaltung zu führen und die Fühlung mit den Bergwerksgenossen zu erhalten, ist es in der Regel unvermeidlich, daß in die gedruckten Cirkulare außer den Adressen auch noch Ziffern oder andere kurze Bemerkungen eingetragen werden. Um kaufmännischen Verkehr werden derartige gedruckte Verordnungen, auch wenn sie beispielsweise eine gesetzliche Privatnotiz enthalten, mit Kreuzverweis zu dem billigen Preise von drei Pfennigen befördert, während bisher von den Bergwerksgenossenschaften bei ähnlichen Verordnungen ein Portofolio von 10 Pf. gefordert wurde. Wenn man erwägt, daß bei einzelnen Bergwerksgenossenschaften die Zahl der Betriebe eine sehr beträchtliche ist und z. B. der Wälderbergwerksgenossenschaft einige 20,000 umfasst, so ergibt sich daraus von selbst, wie hoch sich die Verordnungen stellen, welche den Bergwerksgenossen aus diesen Verordnungen erwachsen. Es soll in der Wälderbergwerksgenossenschaft die Staatsposition für Forti 6000—8000 M. und darüber betragen. Leider hat sich aber die Postverwaltung nicht dazu bereit, den Bergwerksgenossenschaften diese Vergünstigung zu verleihen, sondern zu lassen, welche sie fürchtet, daß daraus Konsequenzen gezogen würden, welche zu einer Verminderung der Postentnahmen führen könnten. Wir glauben, daß weder das Reichsbergwerkamt noch die Bergwerksgenossenschaften sich bei dieser Entscheidung beruhigen werden. Da es sich bei den letzteren um öffentliche Angelegenheiten handelt, so wird man denselben die Vergünstigung nicht entziehen können, welche anderen öffentlichen Institutionen, ja sogar dem kaufmännischen Verkehr zugebilligt ist, und wir hören auch, daß die Absicht vorliegt, die Frage in der höheren Anstalt zum Austrag zu bringen.

Eine, namentlich für die auf dem Prinzip der Selbsthilfe errichteten Verein Krankenkassen höchst wichtige Entscheidung hat unlängst das 1. Kammergericht in Bezug auf die Eintragungsfähigkeit der Arzenei-Genossenschaften getroffen, indem dasselbe den Rechtsgrund absperrte, daß es Verboten, die eine Genossenschaft bilden, erlaubt ist, Arzeneimittel im großen Umfange und an die Mitglieder zu verkaufen. Arzeneimittel, so heißt es in dem Erkenntnis, daß der Einkauf der Arzeneimittel auf erlaubtem Wege erfolgt ist, kann die Vertheilung dieser Mittel an die Vereinsmitglieder für eine strafbare Handlung nicht erachtet werden. Sind die Mittel durch und für den Verein angekauft, so sind sie gemeinliches Eigentum der Mitglieder und die Vertheilung unter diese fällt nicht unter § 376 des Strafgesetzbuchs. Dies Gesetz verbietet die Zubereitung, das Feilhalten, Verkaufen und die Ueberlassung „an andere“ von Giften und Arzeneien, deren Handel nicht freigegeben ist. Bei einer Vertheilung unter die Mitglieder des Vereins kann von einem Feilhalten und Verkaufen ebensowenig wie von einem Ueberlassen an andere die Rede sein.

Astronomische Beobachtungen im November 1885.

Der Bogen, welchen die Sonne über unserem Geographischen Meridian, wird immer kleiner und so kommt es, daß die Zenithdistanz von Anfang bis Untergang derselben Ende des Monats nur noch 8 1/2 Stunde beträgt. Der erste Lichtstrahl am Siditohimmel erscheint Mitte November früh 5 1/4 Uhr, die letzten Strahlen der Abenddämmerung verschwinden ebenfalls bald nach 6 Uhr. Die Hohen des Mondes treten zu folgenden Zeiten ein: 14. Nov. den 6. abends 9 Uhr 51 Min., das erste Viertel den 14. nachts 10 Uhr 47 Min., der Vollmond den 22. vormittags 10 Uhr 27 Min., das letzte Viertel den 29. früh 2 Uhr 45 Min. In der Erde befindet sich der Mond am 13. früh 8 Uhr (Abstand 54,530 Meilen), in der Erde am 24. abends 10 Uhr (Abstand 49,300 Meilen). Von den den bloßen Auge sichtbaren Planeten können wieder die meisten beobachtet werden. Eine Ausnahme macht nur Merkur, welcher den ganzen Monat hindurch für uns eine so unangünstige Stellung einnimmt, daß er nicht gesehen werden kann. Venus, Abendstern, entfernt sich in ihrem Scheinbaren Laufe

immer weiter von der Sonne, insofern die Bewegung geht sie Ende des Monats erst abends 6 Uhr ab. Sie nähert sich der Erde und die Erde des Planeten wird für uns größer, derselbe erscheint uns heller, gleichwie wir von seiner Scheibe nur etwas mehr als die Hälfte beleuchtet erblicken. Venus ist schon in der Dämmerung am Südwesthimmel zu finden.

Mars, rechts am Abendhimmel des Abends, tritt zu Anfang des Monats ganz in der Nähe des hellen Sternes, des Regulus, im genannten Sternbild; beide Gestirne haben nahe gleiche Farbe (roth) und Helligkeit. Bald jedoch entfernt sich der Planet von dem Sterne nach links hin. Die Anfangszeiten des Mars fallen zwischen Mitternacht und 1 1/2 Uhr nachts und seine Entfernung von der Erde beträgt nahe 30 Millionen Meilen. Jupiter, der größte Planet unseres Sonnensystems, kommt mit erst in der zweiten Hälfte der Nacht zu Gesicht und erhebt sich zwischen 3 und 1 1/2 Uhr früh über den östlichen Horizont. Seine Bewegung im Sternbild der Jungfrau ist rechtsläufig. Wegen seiner Helligkeit ist er noch einige Zeit in der Morgen-dämmerung zu verfolgen. Entfernung von der Erde 118 Mill. Meilen. Saturn, in rechtsläufiger Bewegung im Sternbild der Zwillinge, ist die ganze Nacht über unserm Gesichtskreis; Mitte des Monats geht er bereits abends gegen 6 1/2 Uhr auf und in den letzten Abendstunden steht er hoch am Nithimmel. Seine Bewegung unter den Sternen ist so langsam, daß er für das bloße Auge kaum merkbar nur ganz langsam abwärts und daher leicht wieder gefunden werden kann; von den Ziffern gleicher Helligkeit unterscheidet er sich durch sein unbegrenztes Licht. Entfernung von der Erde 106 Millionen Meilen.

Uranus hat rechtsläufige Bewegung im Sternbild der Jungfrau und ist daselbst unter den Sternen γ und α ausfindig zu machen. Am 1. Nov. ist er nur ganz langsam abwärts und daher leicht wieder von der Erde ist er gegenwärtig 380 Millionen Meilen entfernt. Am 22. wird Aldebaran, der hellste Stern im Stier, vom Monde bedeckt. Wie uns ist die ganze Dauer der Verbergung zu beobachten, da dieselbe einen halben Tag nach dem Vollmonde beginnt. Der Eintritt des Sternes in den Mond geht nachts 10 Uhr 52 Min. vor sich, das Wiedererscheinen erfolgt um 12 Uhr 4 Min. Der des Eintritts 80 Grad, des Austritts 258 Grad, vom Nordpunkte der Mondhöhe aus gerechnet. In diesem Monat zeigen sich die Sternschnuppen häufiger als gewöhnlich. Sternwarte Leipzig. G. Leppla.
