NOBILISS. AMPLISS. DOMINIS,
REIPUB: NORIBERGENSIS SENATORIBUS
PRUDENTISS. DOMINIS
MEIS OBSERVANDISS.

Rerum quæ sub hoc universo continentur, siue eæ sint ex censu animatarum, siue inanimatarum, terrestrium siue aquatilium, rariorum quidem & passim & ubique non occurrentium admiratio me à teneris tenuit, adeòque fodicavit, ut iis colligendis jam dudum animum adjecerim. Videbatur & studium atque professio mea ab hoc non tantum non abluere neque adhorrere, sed verò id impendio exigere: Si enim cuiusvis scientiæ vel artis suæ subiectum familiariter cognitum habere, necessario incumbit; quidni & mihi simplicia siue pharmaca ingredientia cujusmodi rariora illa ut plurimum sunt, domestice nota esse debent? In animum verò nunquam induxi meum, neque etiam hoc à me impetrassem unquam, ut istarum quidquid est quisquiliarum à me pedetentim collectum, velut theatro publico destinarem atque exhiberem, horum temporum & morum non ignarus, quibus, sat scio, hoc opusculum non ut Phidiae signum primo statim aspectu omnium subfragiis probatum iri, sed fore quorum alii me Phaethonta viribus meis majora tentasse, & humeris graviora suscepisse; alii Ardelionem pennas nido majores extendisse, & ultra septa transiisse: alii Morychum domesticorum negotiorum negligentem, aliena tractasse; alii Suffenum sibi ipsi blanditum & stultè se admiratum esse; alii Bibulum laureolam in mustaceis quæsisse & ex nauci & frivolis rebus ineptè gloriam captasse; alii denique dicturi sint, me ad gentiles & adgnatos deducendum, quòd mihi non melius sapiam, sed pecuniam hanc in rem impensam temerè prodigam: Nisi mihi alia prorsus insedisset ratio, vindicanda scilicet ab interitu ejusmodi esse, si non ipsa re, ære tamen: Me tamen meo pede ac modulo ante omnia mensus, & emensus fui, me absque jactura rerum & dierum horulis ali-

quot

quot subsceivis, & seriis negotiis subtractis, id quidquid est rei Chalcographo sub manus & incudem q. dare posse. Et si alius ut volupe, ita integrum atque concessum est, in alias res ludicras, interdum parum vel minimè honestas sua prodigaliter profunderè, quidni mihi sumpserim, vel tantum hanc in rem insumere? Nec est, si vel maximè mei amator & admirator essem (quod tamen à me maximè alienum esse nòrunt, qui me nòrunt) ut ex tantillo negotio aliquid laudis vel gloriæ, quæ non nisi ex magnis & arduis surgere, eaque comitari didicit, sperem; Quidquid verò ejus sit, ut chypeus, quo caput contra ejusmodi Momorum, Zoilorum & Theonum tela & morsus ob muniam & defendam, suppetat, En Vobis, Patres Patriæ Perpetuò Pii, Fasciculum hunc, qualis qualis etiam & quantulus sit, totum mancipo, spe fretus certâ à Vobis non solum illum, sed & me, meaque omnia, ut hætenus, ita deinceps contra omnem calumniam & injuriam assertum atque defensum iri: DEUS Opt: Max: Vos, Patres Conscripti, patriæ commodo & bono diu multumque incolumes & florentes conservet & protegat. Dabam Noribergæ 6. Aug: Anno clò lcc XVI

Lazurst. oder Bergblau.

Galactites.
Milchstein.

Lapis Aldenbergensis odoris violacei.
Ein Stein von Aldenberg von Violgeruch.

LAPIDE S

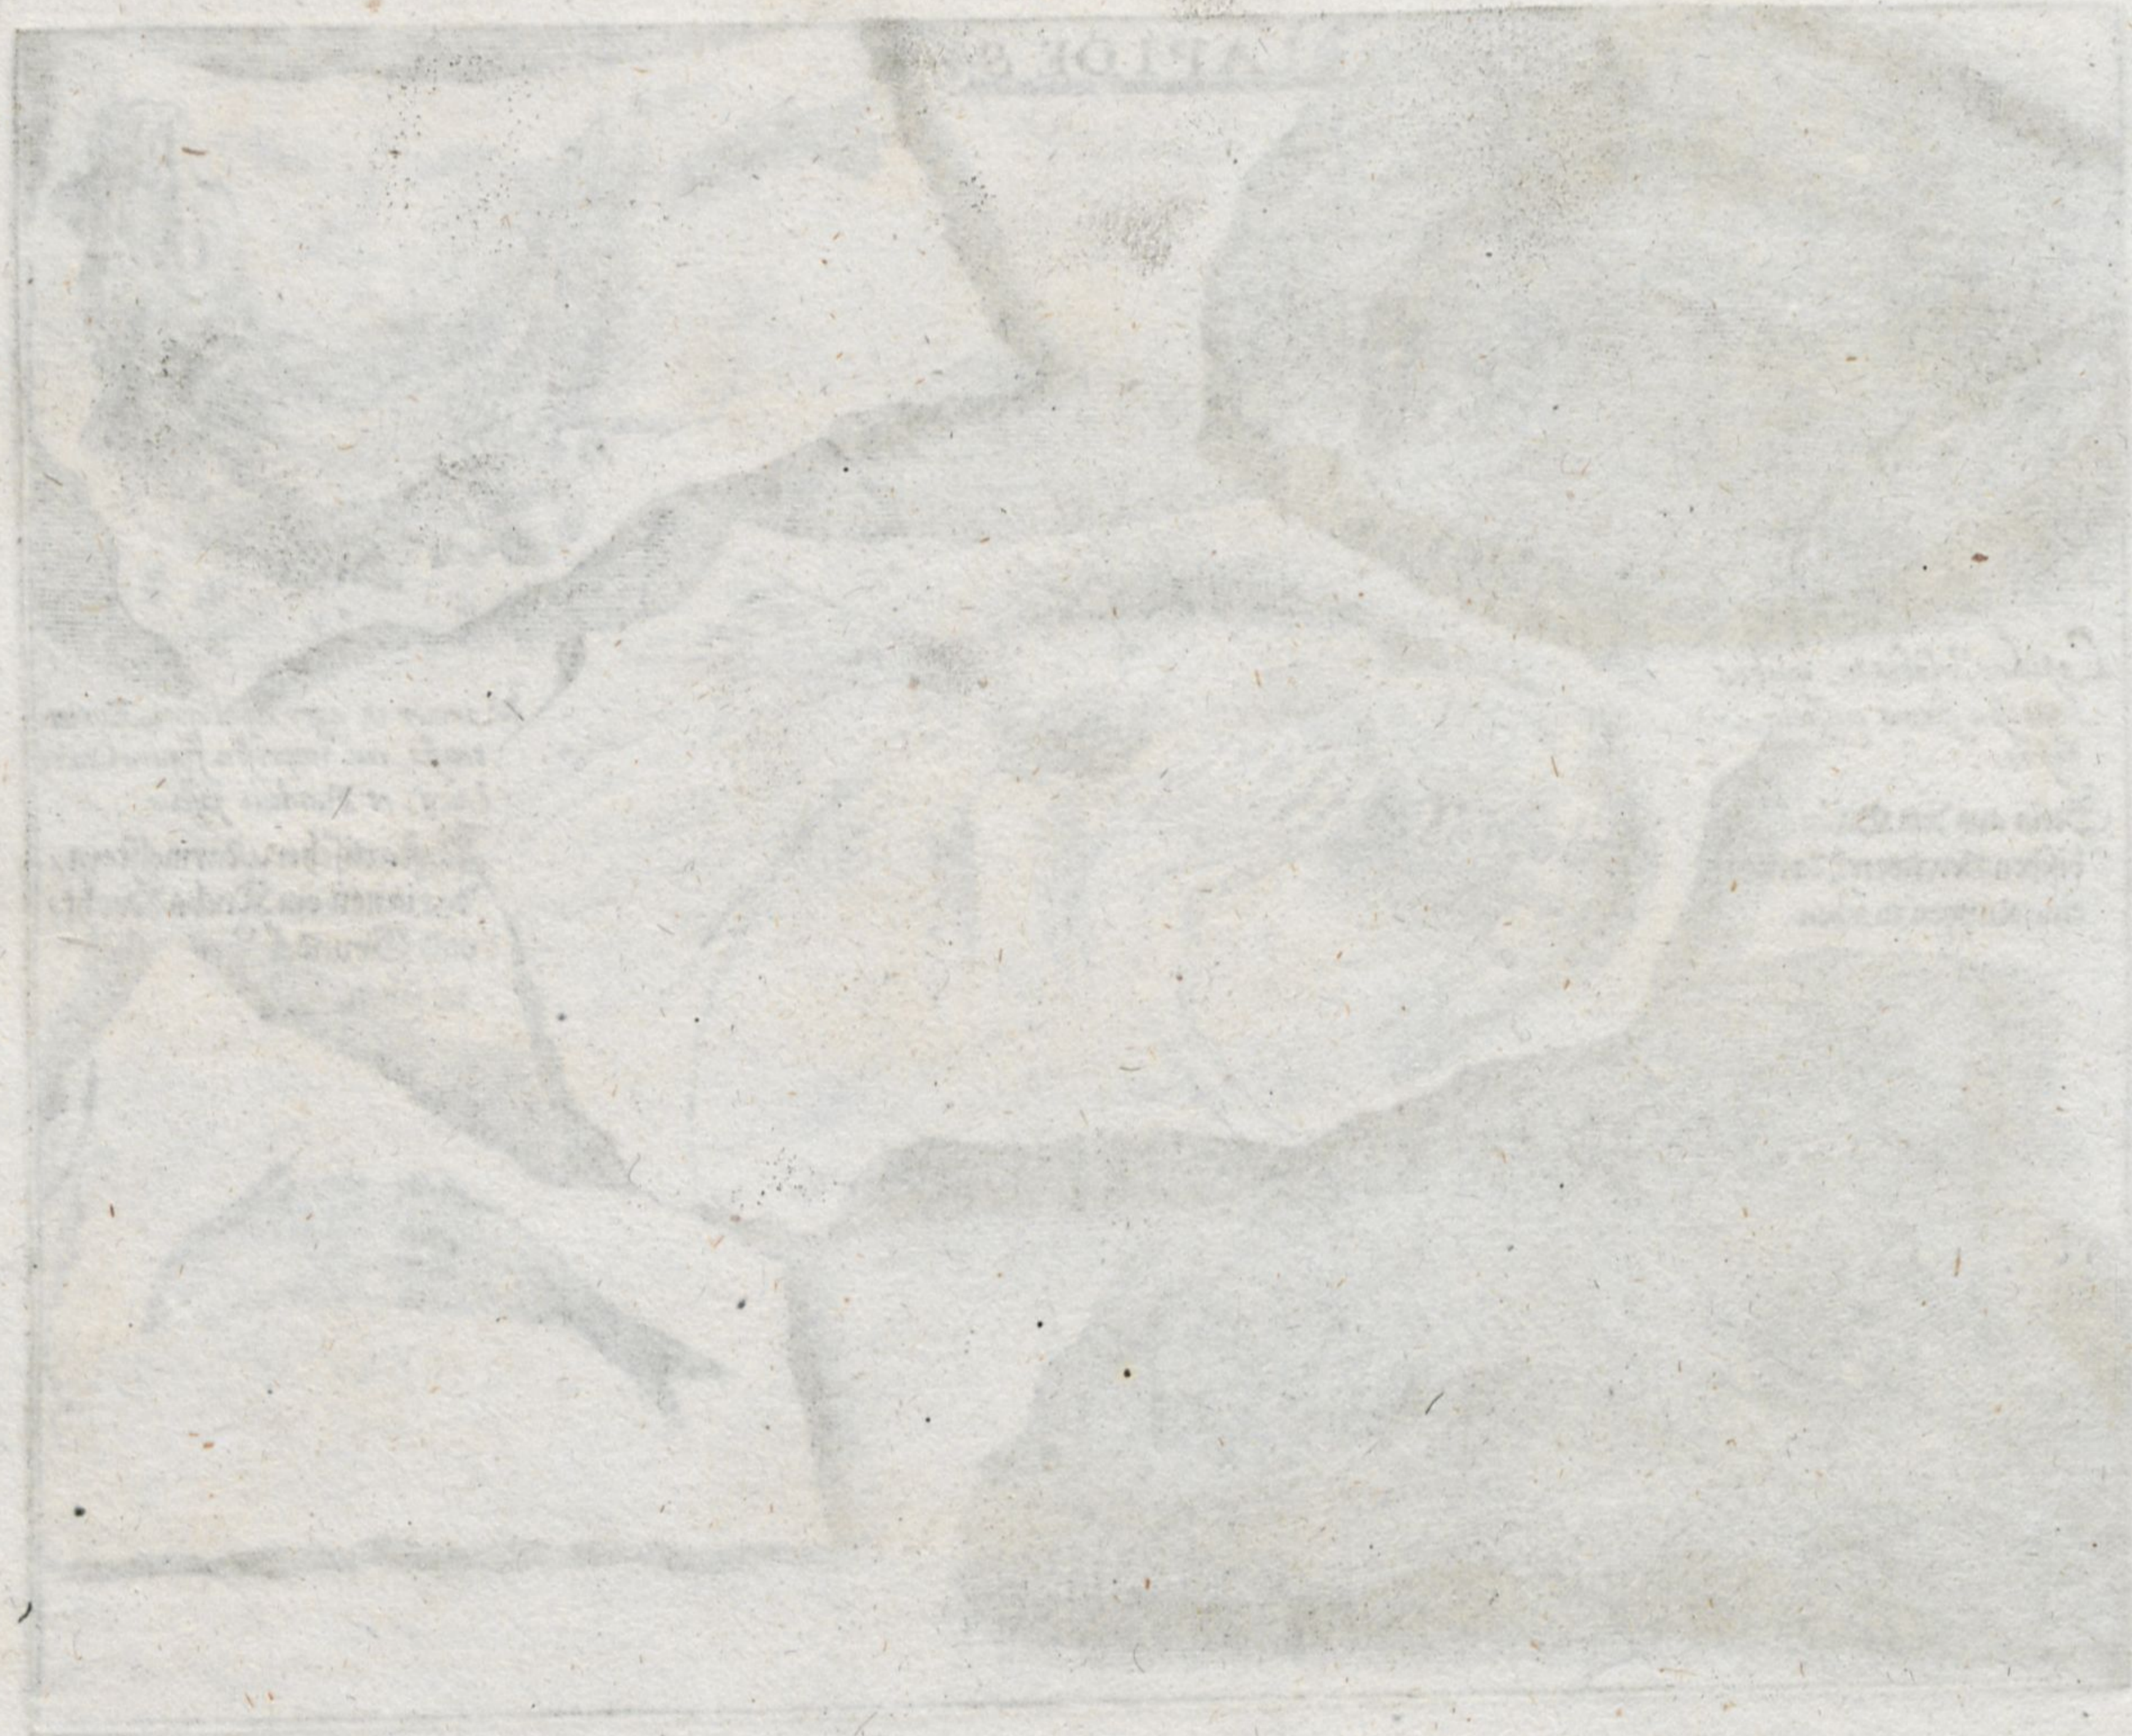

Lapides Islebiani, quibus
 impressa forma musceta
 pisces.

Stein aus dem Bisle,
 bischen Berckwert, darau
 eine Kuppen zu sehen.

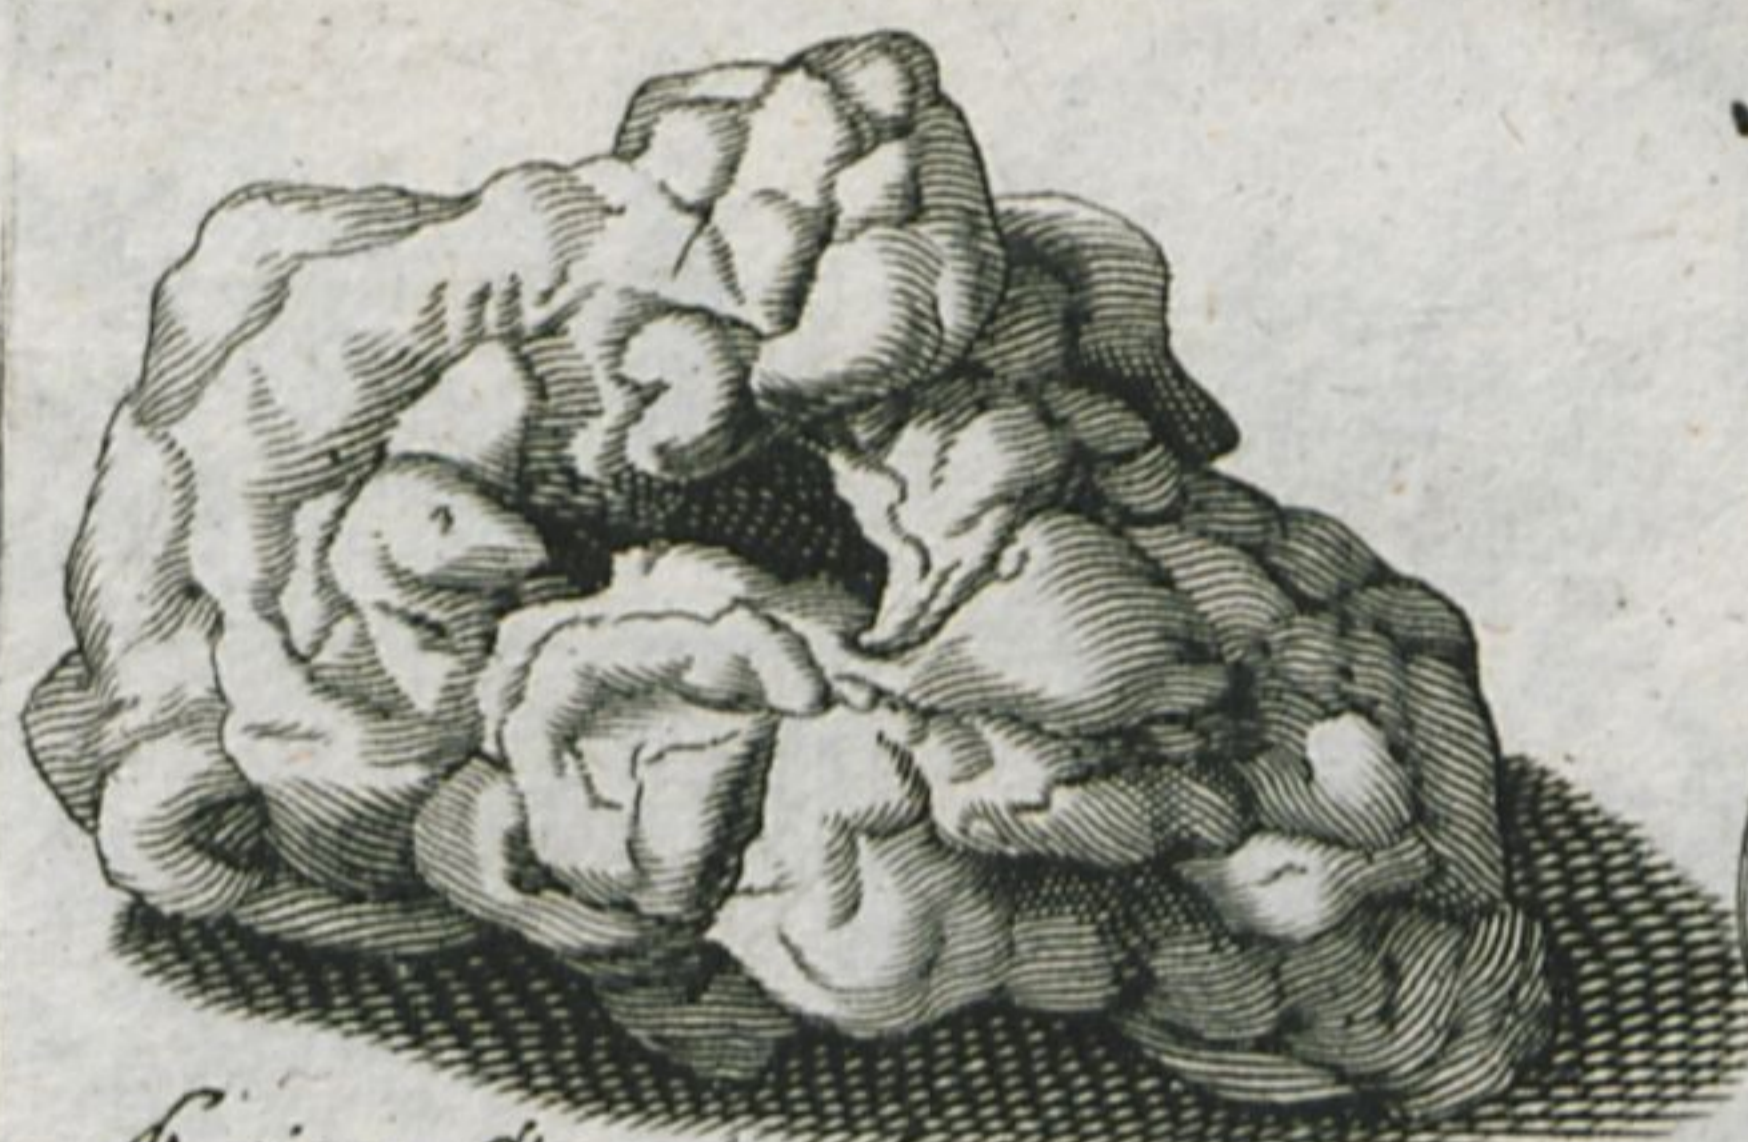

Marmor in agro Epheopatz, Eystet-
 tensis, cui impressa figura Cancrj,
 Lucij, et Funduli piscis.

Eystattischer Wärmelstein,
 darinnen ein Krebs, Hecht,
 und Grundel
 zu sehen.

LAPIDES

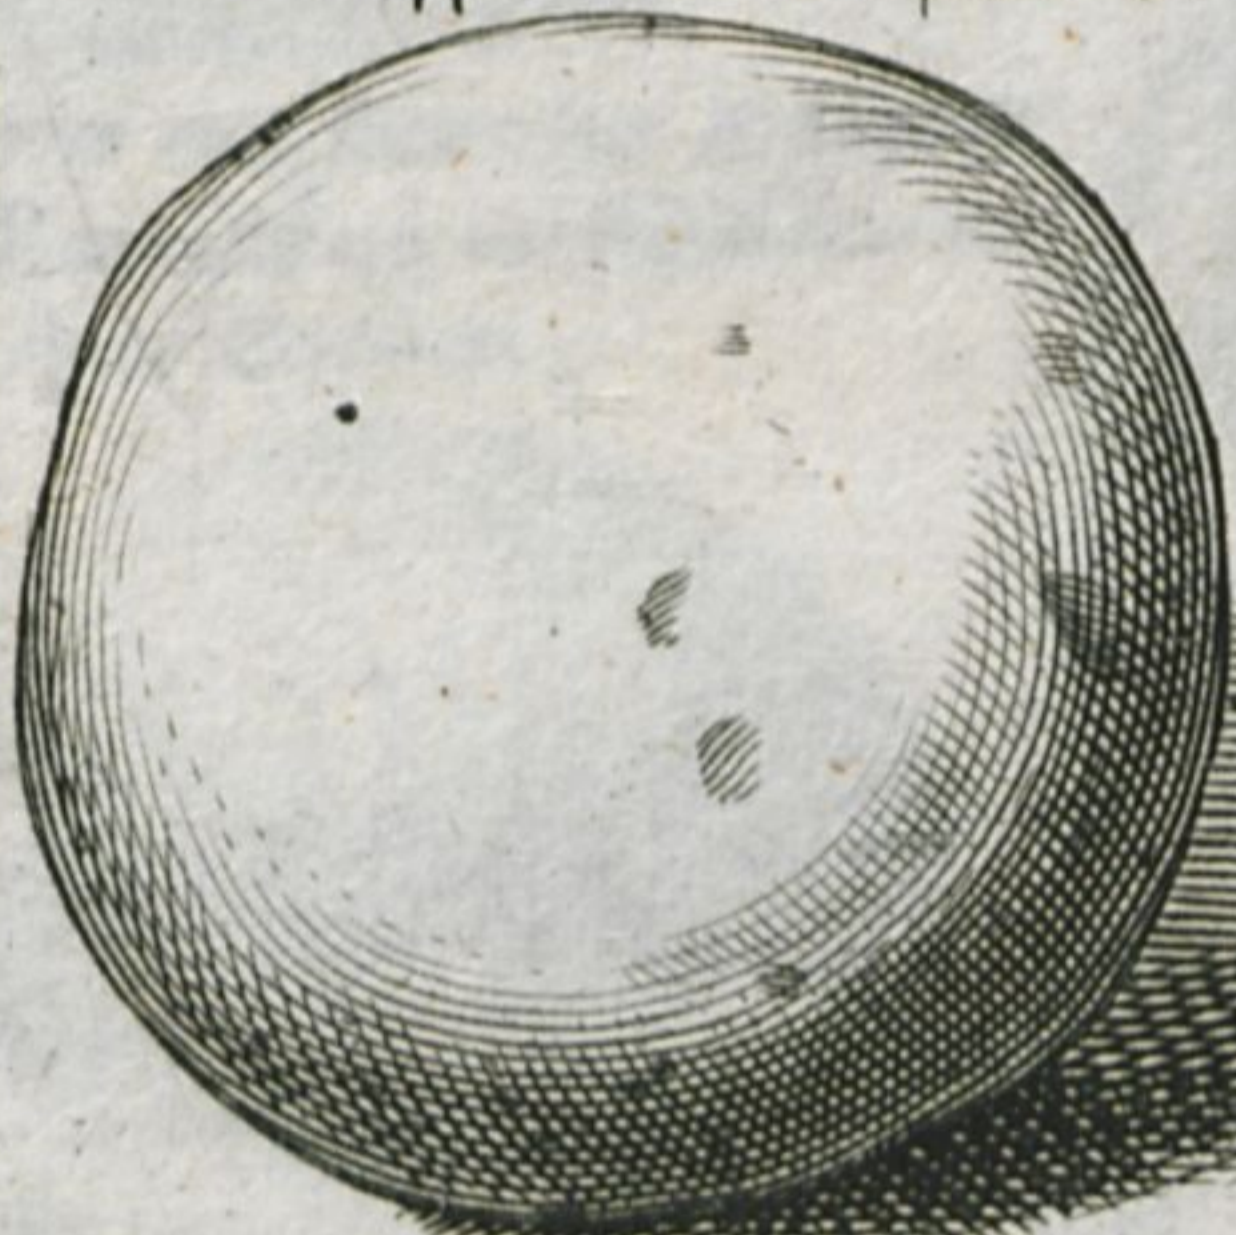

Actites cinerei coloris.
Klapper oder Erdstein.

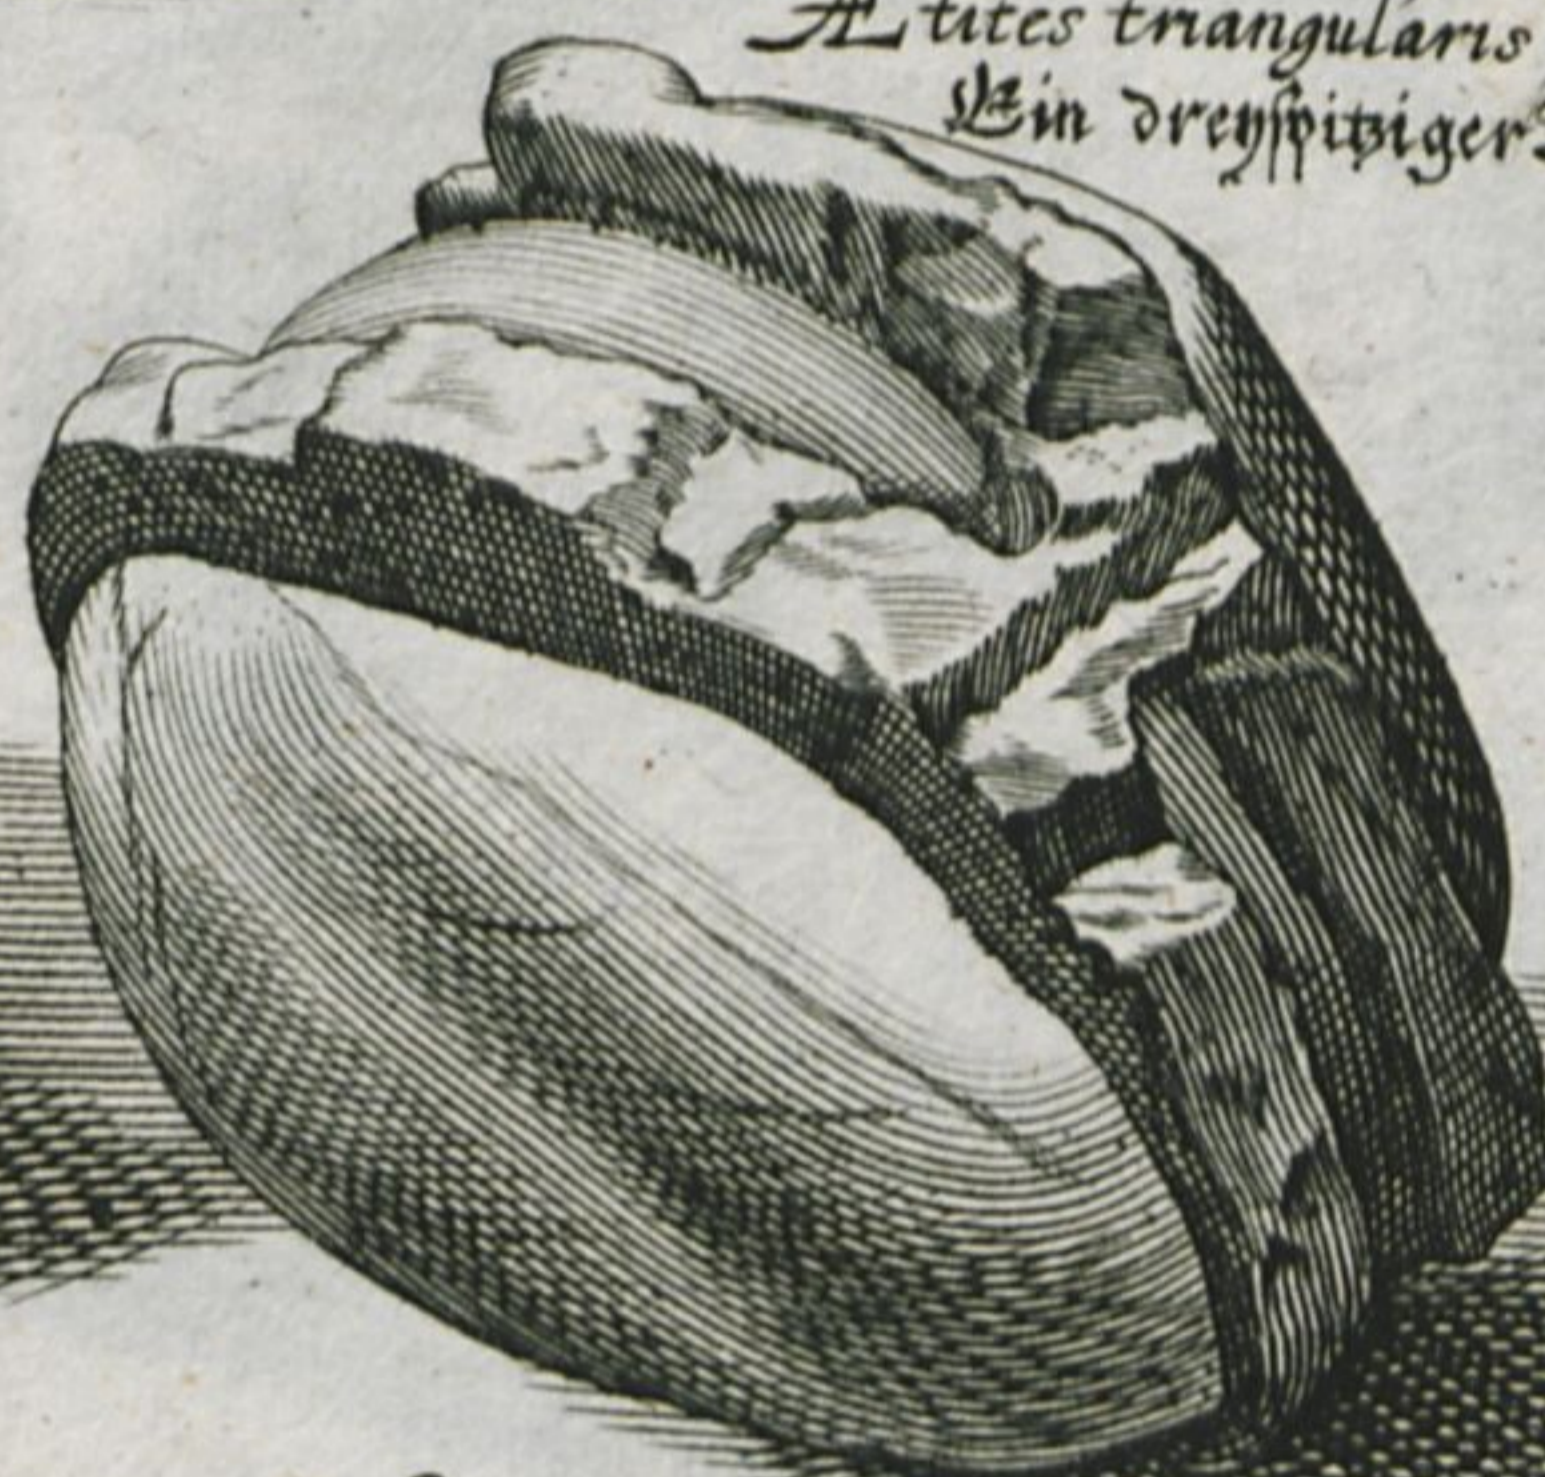

Actites triangularis.
Ein dreyspiziger Adlerstein.

Actites lapis rotundus punctat.
Runder getropfter Adlerstein.

Actites Arabicus.
Ein Adlerstein aus Arabia.

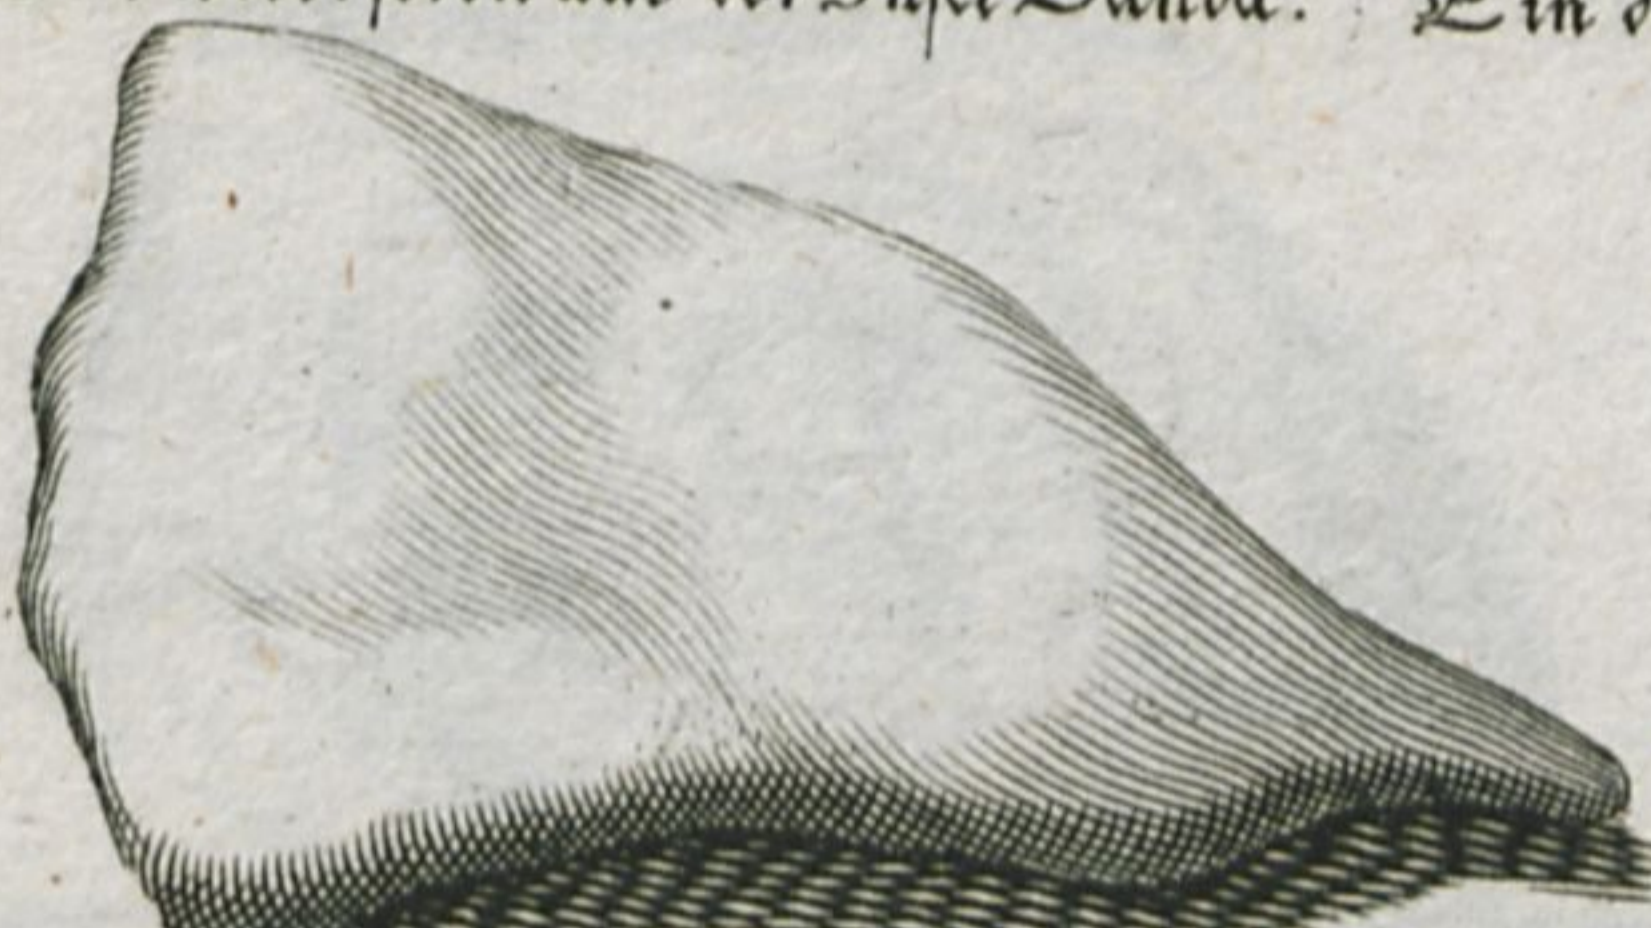

Actites ex Insula Banda.
Ein Adlerstein aus der Insel Banda.

Actites duplicat African.
Ein doppelter Adlerstein aus Africa.

Belemnitis rotundus fluvialis.

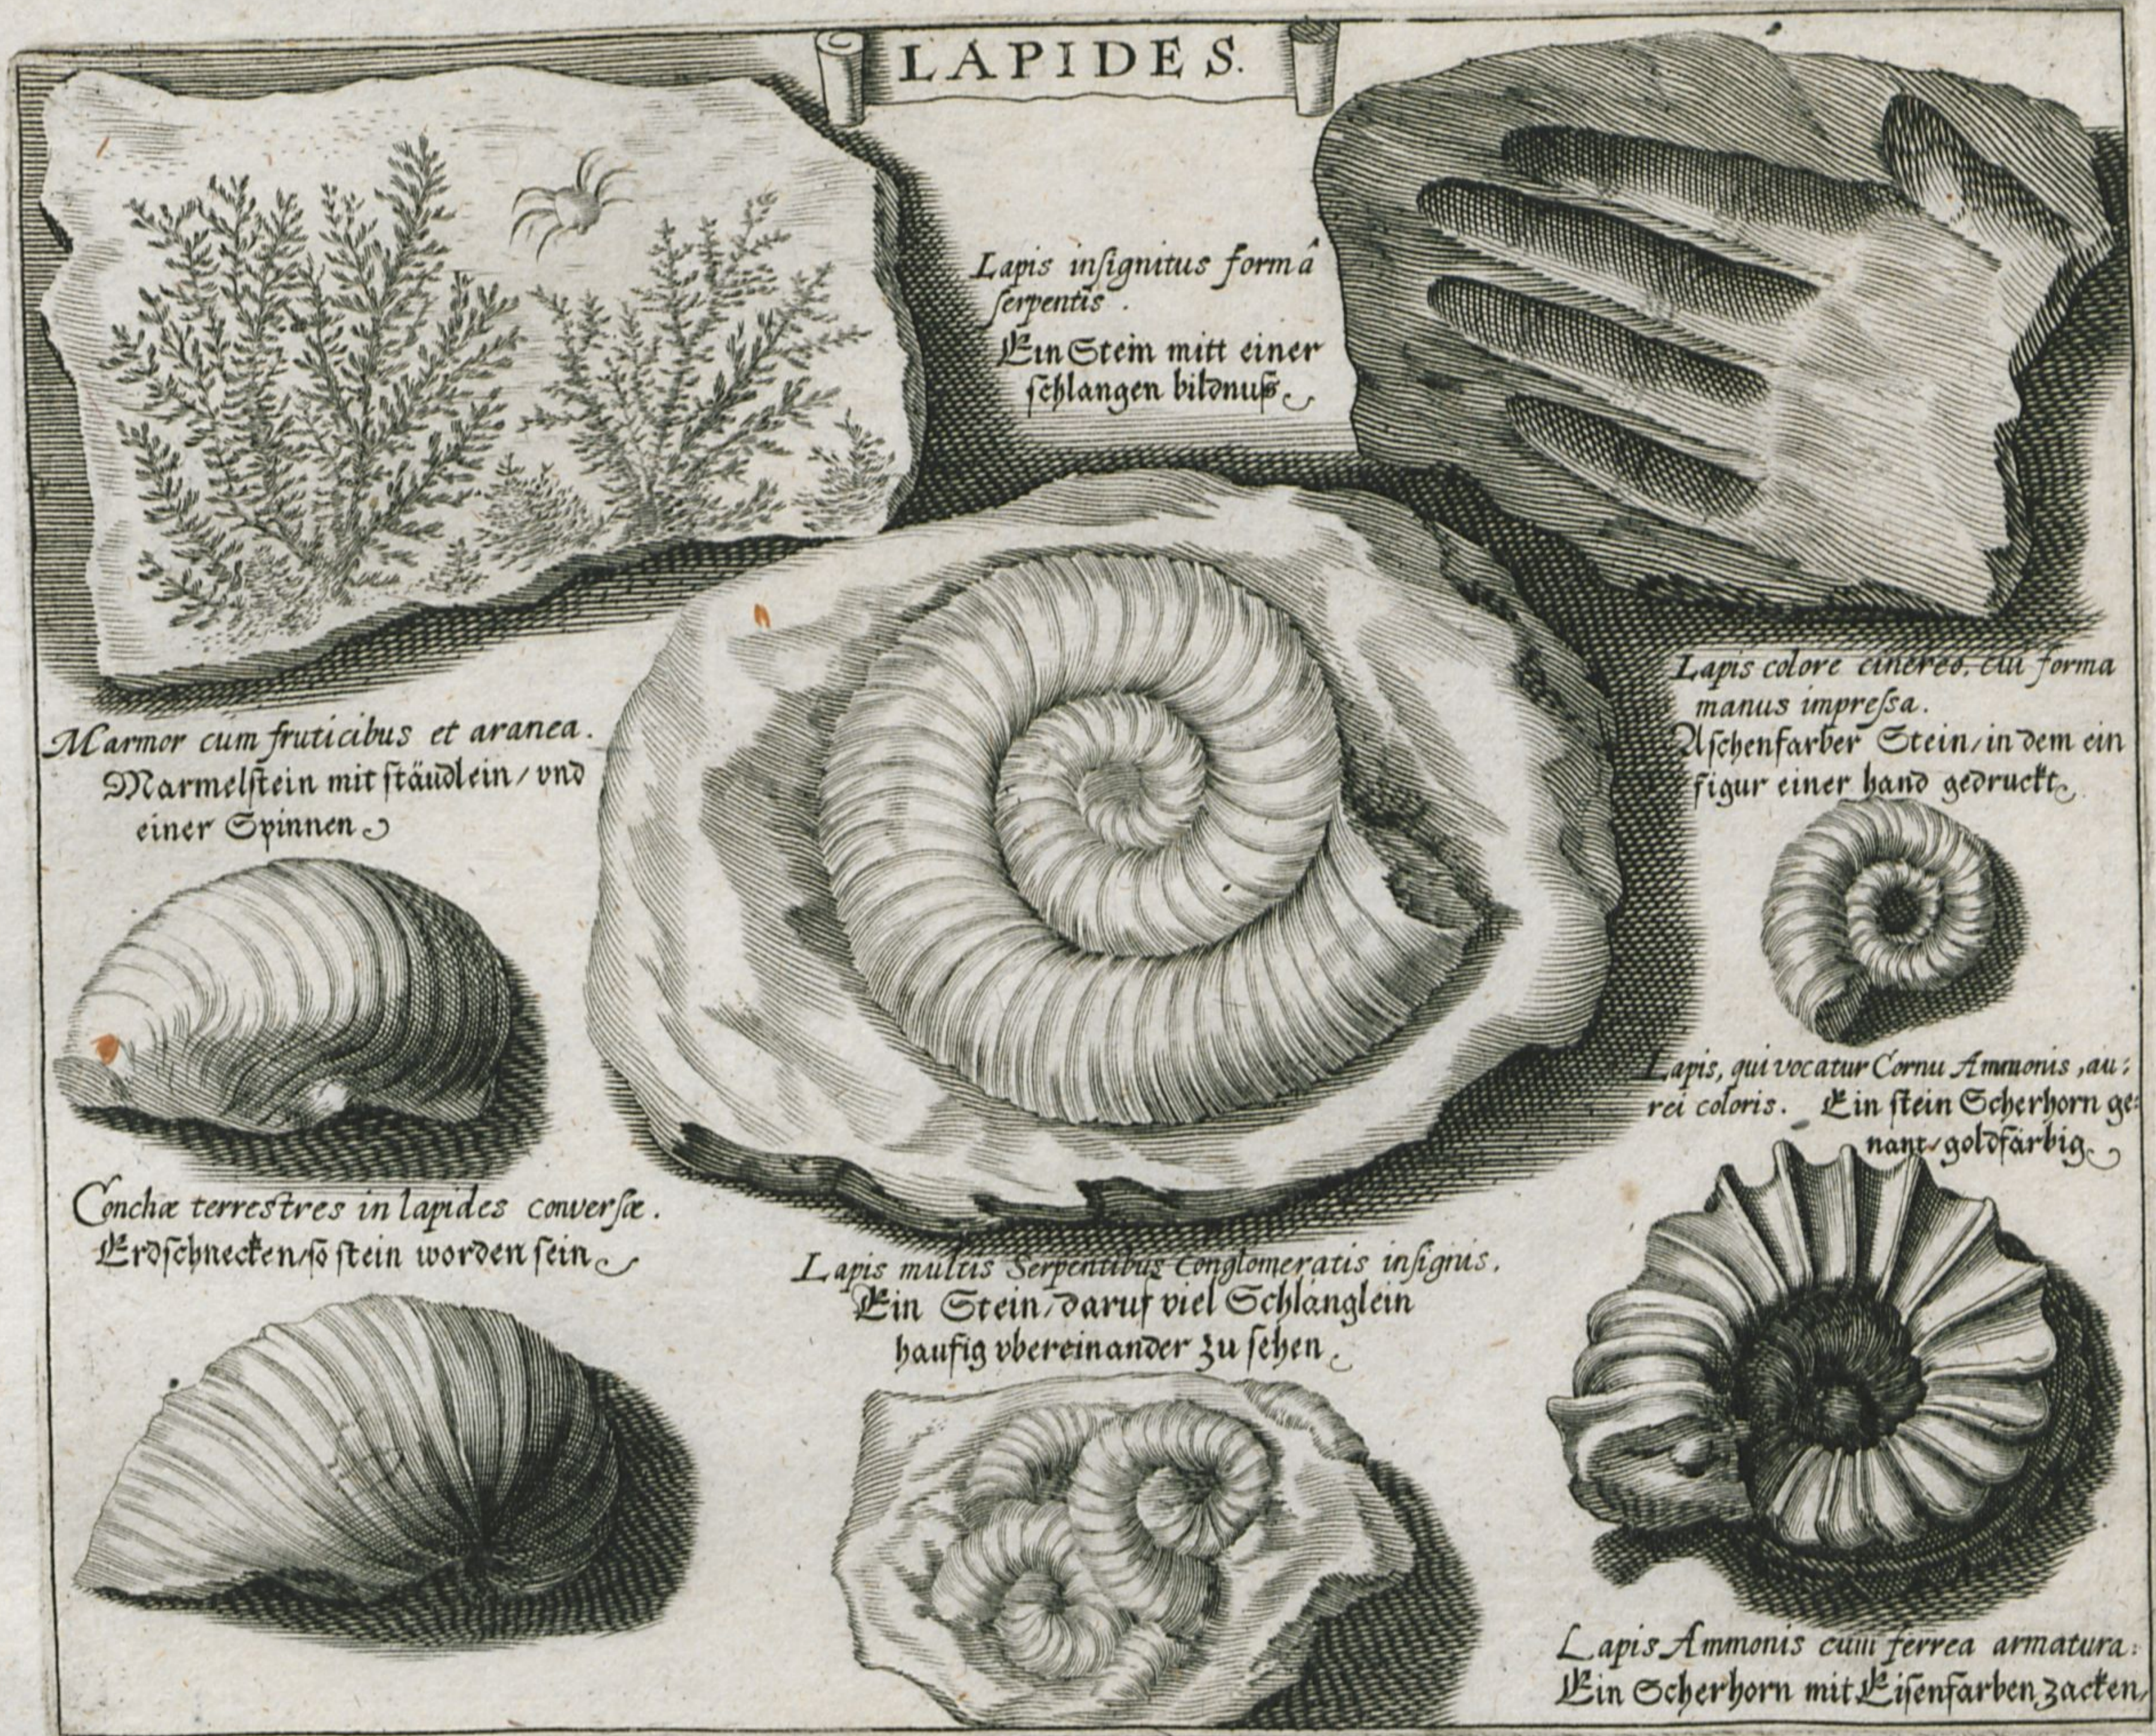

Belemnitis Germanic fluvialis
Ein Deutscher Adlerstein so in flüssen gefunden wird.

Geodes actites Species.
Runder kleiner Adlerstein.

LAPIDES.

Lapis insignitus formâ serpentis.
Ein Stein mit einer schlangen bitonus.

Marmor cum fruticibus et aranea.
Marmelstein mit ständlein / vnd einer Spinnen.

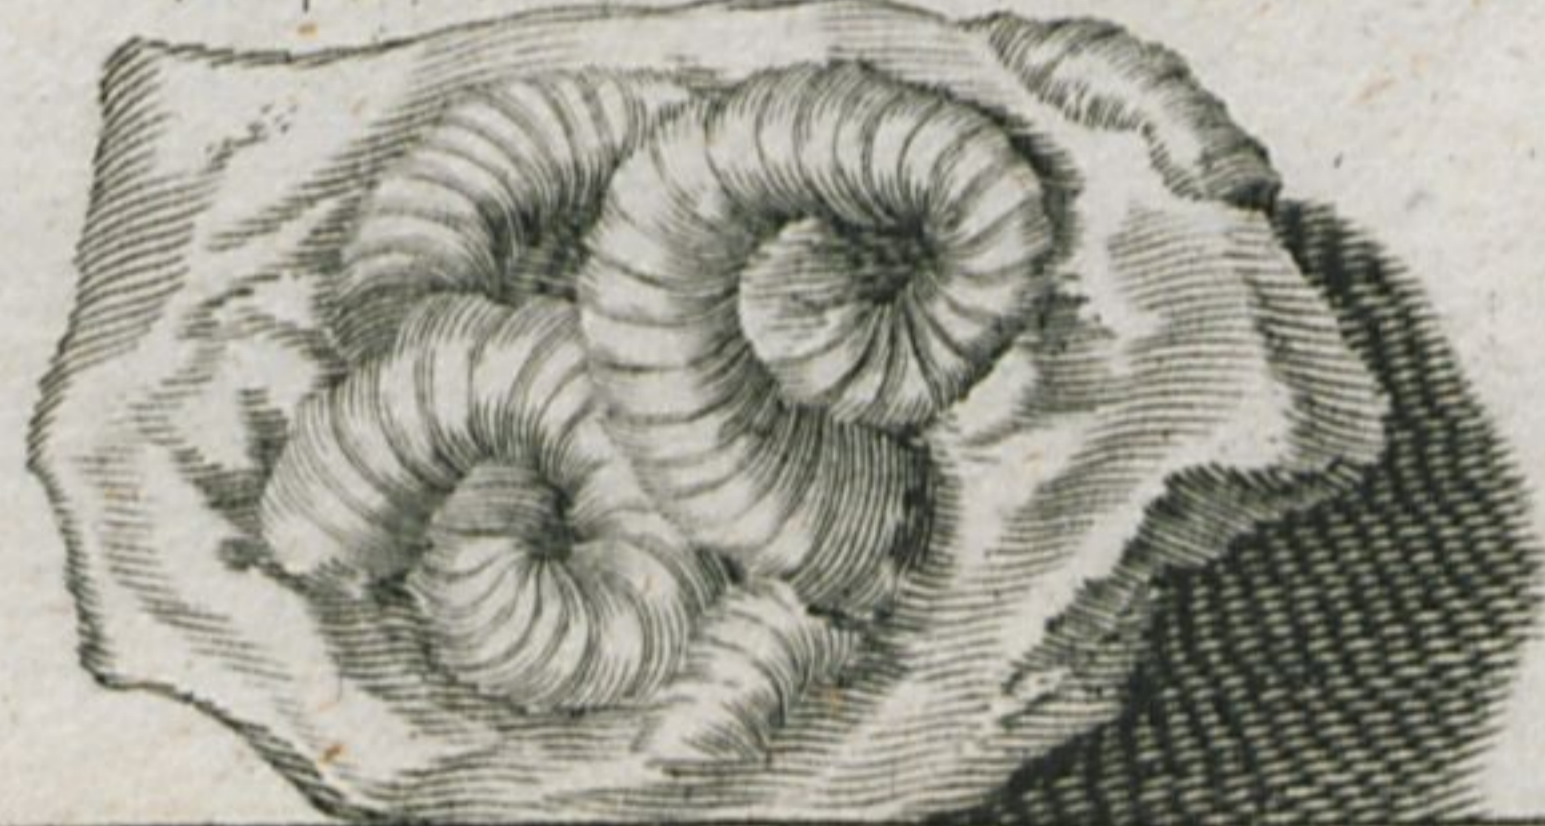

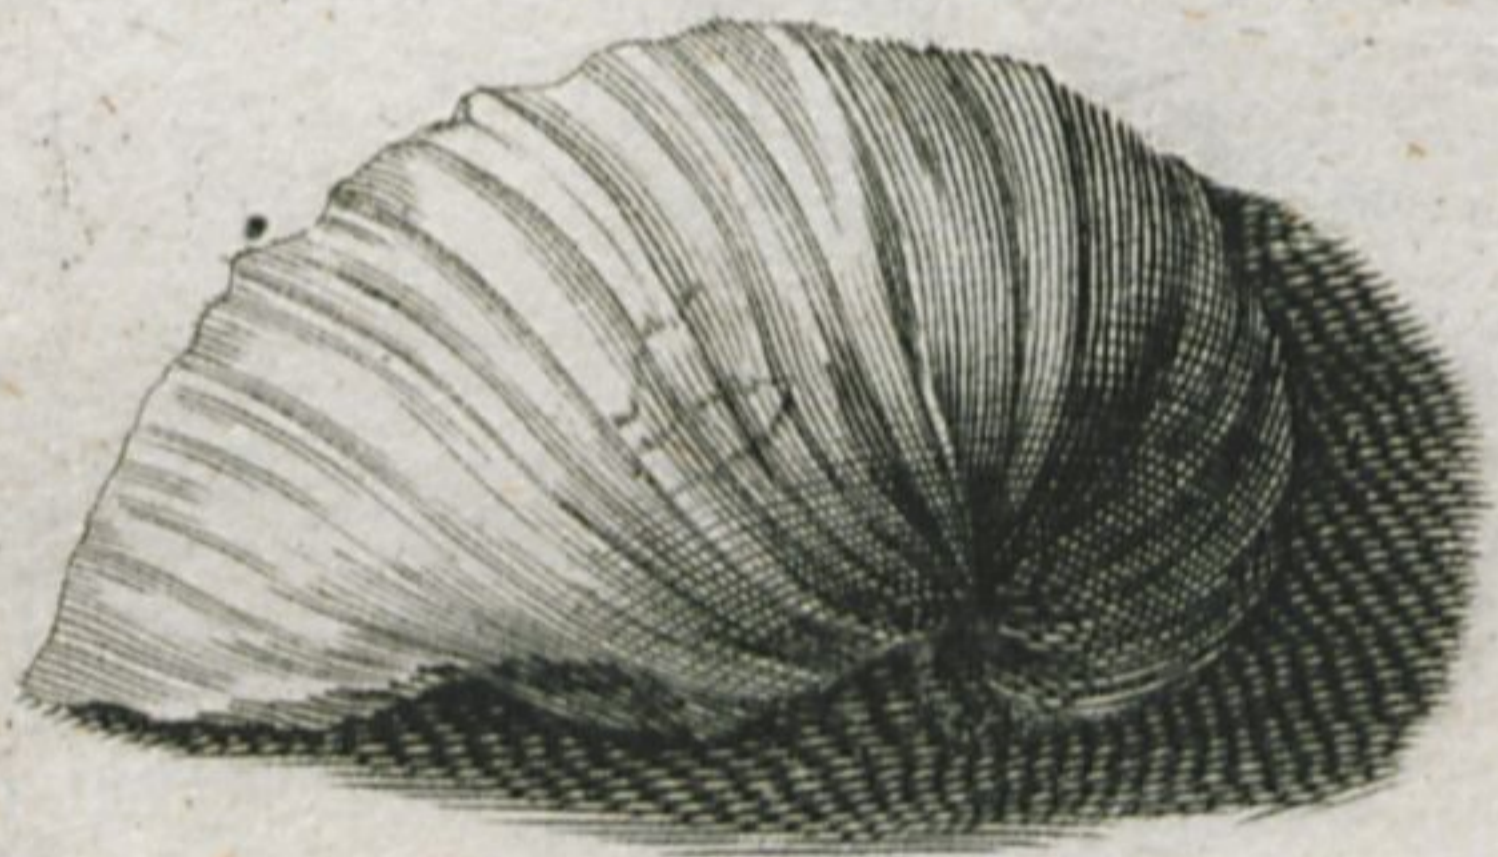

Lapis colore cineres. cui forma manus impressa.
Aschenfarber Stein, in dem ein figur einer hand gedruckt.

Lapis, qui vocatur Cornu Ammonis, aurei coloris.
Ein Stein Scherhorn genannt goldfarbig.

Conchæ terrestres in lapides conversæ.
Erd-schnecken so stein worden sein.

Lapis multis Serpentibus conglomeratis insignis.
Ein Stein, daruf viel Schlanglein häufig vberinander zu sehen.

Lapis Ammonis cum ferrea armatura.
Ein Scherhorn mit Eisenfarben zacken.
